

TRANSPARENT WHITEPAPER · V1 · NFA

UPPERDECK RIPMASTER 3030

\$UR3030 · a liquid trading-card game on SuperRare Liquid Editions

by Gianni Arone (lovebeing · @_lovebeing_) · SuperRare Liquid Editions – Cohort 1

One token. One fire. A deck that burns down to 77.

- ▶ On-chain this is exactly **one thing**: a SuperRare **Liquid Edition** — the ERC-20 **\$UR3030** on a bonding curve in **RARE**.
- ▶ The **196-card deck is the artwork** of that one edition, drawn live by a render contract. No per-card tokens.
- ▶ The crowd **burns the field down to 77** by burning the token — a published milestone queue, ash in real time.
- ▶ Season's end: survivors + **compressed** retirees live on as **1/1 lenses** (ERC-721, assisted setup).
- ▶ **No treasury. No team pre-mint. No fee wallet.** No other contract for one to hide in.

THIS DOCUMENT IS TRANSPARENCY, NOT A PITCH.

\$UR3030 is a **collectible game token**, not an investment. It can go to zero. The cards are **art, parody, and memes**. Play for the fun of it. Nothing here is financial, legal, or tax advice — see the last page.

Open the field. Burn it down to 77.

- ▶ **The field opens** – all 196 cards alive in the render of the one edition, five tiers: Common → Prizm.
- ▶ **Rip & collect** – a pack is a guided buy of ~350 \$UR3030, burned in full; your 7 pulls come off your burn tx.
- ▶ **The published queue** – weakest first, fixed at season open. Every milestone of cumulative burn turns the next card to **ash**: first at ~15k, all 119 at ~4.36M ≈ a sold-out season.
- ▶ **Court & arena** – votes, wagers, trades run **site-side** as signal shaping next season. **Burns are the consensus.**
- ▶ **Season's end** – 77 survivors mint as **1/1 lenses**; retired cards can be **compressed** into 1/1s; the rest stand as ash.

1/1

every card's possible afterlife

A cheap micro-token on a Uniswap-v4 + Doppler curve.

- ▶ **Supply cap: 3,030,000 \$UR3030**, capped. Minted on **buy**; the cap is a live-supply ceiling, not a lifetime budget.
- ▶ **Opening price ≈ 1 RARE / token ($\sim \$0.02$)** – kept cheap so every toll and vote is a micro-move.
- ▶ Liquidity is a **Doppler multicurve** (log-normal) inside a **Uniswap-v4 pool**; reserve/quote is **RARE**.
- ▶ **FDV at a full curve $\approx \$606k$** – an artist-scale niche edition, by choice. Verified with `--preview` pre-mainnet.

 $\sim \$606k$

full-curve FDV

Two on-chain unknowns are confirmed with the Rare CLI before mainnet: the effective demand multiple **M** and the **sell-fraction**. The whole model is reproducible in `scripts/token-model.mjs`.

One direction: the fire.

🔥 BURNS (ON-CHAIN, REAL)

- every pack – **in full** (~350/rip)
- voluntary conviction burns
- season-end **compression** costs
- irreversible, public, final

📈 THE CURVE (ON-CHAIN, REAL)

- buys deepen the RARE reserve
- sells walk back down it
- burned supply re-mints only on new buys
- read it live: `getMarketState()`

🗳️ SITE-LAYER (SIGNAL, HONEST)

- court votes, wagers, trades, binder
- shape next season's queue
- no tokens move – **burns are the consensus**

There is no toll wallet, no creator-cut contract, no house pool – because there is no other contract at all. One ERC-20 + one read-only render; the chain is the receipt.

The one premium ritual — a real buy-and-burn.

- ▶ A pack is a site-guided **buy of ~350 SUR3030 ≈ \$7** (seven cards, ~\$1 a card), **burned in full** – native curve operations, no pack contract.
- ▶ Your 7 pulls derive from your burn tx; your collection is your rip history + holdings – **not** a token reprice, FDV unchanged.
- ▶ **Within a season:** price walks a line from base → ceil as the allotment sells (S1 350 → 525 tokens).
- ▶ **Across seasons:** the field shrinks, so the **allotment (cards ÷ 7) dwindles** and the floor rises.
- ▶ Sell out the allotment and packs **close for the season** – the schedule is site-enforced and auditable from the burn txs.

SEASON	PACK ALLOTMENT	BASE ≈ \$*
I · Summer	10,000 packs	\$7.00
II · Fall	7,500 packs	\$9.00
III · Winter	5,000 packs	\$12.00
IV · Spring	2,500 packs	\$16.00

*Floor priced at the launch spot (\$0.02); token appreciation rides on top. Recalibrated to the live token price at each season open.

Four a year — and every card gets an afterlife.

- ▶ Each season **opens a full field** and the crowd burns it down the milestone queue to **77 survivors**, who mint as **1/1 lenses** – the standard deck, ownable.
- ▶ **The Compression rite:** corner a retired card's claim set and choose – let it **stand as ash**, or burn the compression cost and it is **reborn as a 1/1**. Land a final blow, claim the **Ash-Trophy** lens.
- ▶ **The end state:** potentially the entire original **196 live on as 1/1 collectibles** – a permanent museum of a field that no longer exists.

Built to ratchet, not to spike — and to add liquidity.

- ▶ **Un-pullable liquidity** — the RARE reserve lives in the pool, not a yankable LP. Sells walk down the curve; they can't drain it to zero.
- ▶ **No team pre-mint** — nothing is minted at genesis to dump on you.
- ▶ **Buy-and-burn packs** — RARE flows in on every buy, tokens vanish on every burn, so fewer tokens sit on a deeper reserve.
- ▶ **Adding liquidity** — seed real RARE at deploy and let every buy deepen the reserve organically; the curve itself is the standing liquidity.

WHAT THIS IS NOT.

Not a promise the price goes up. Net supply moves with **buys - burns** — the sign is not guaranteed. Deflationary *pressure* is a design goal, not a floor. Read the real trajectory live from `totalSupply()`.

Everything that matters is on-chain and reproducible.

- ▶ **One contract surface** – the edition + a read-only render. Nothing else to trust, nothing else to exploit.
- ▶ **Published retirement queue** – `cards/data/_milestones.json`: every milestone and every card's fate, fixed at season open.
- ▶ **Reproducible models** – `token-model.mjs` + `burn-milestones.mjs` re-derive every number in this deck.
- ▶ **Legible actions** – packs, conviction, compression: all burn txs on the one token. The chain is the receipt.
- ▶ **Phase 2 in the open** – the contract game design (`CardVault.sol`) is public, reviewed, and clearly labeled **undeployed**.
- ▶ **Testnet first** – a full Sepolia dress rehearsal before any mainnet deploy.

YOU CAN CHECK US.

Read the contract. Run the model. Watch the events. Transparency here means you don't have to trust the copy on this page – the chain is the source of truth.

Ways this can lose you money or break.

- ⚠ **The token can go to zero.** It is experimental and highly volatile. Only spend what you can lose entirely.
- ⚠ **Smart-contract risk.** Code can have bugs. Assume it is unaudited unless a published audit says otherwise.
- ⚠ **Liquidity & slippage.** A thin market means large trades move price hard; you may not be able to exit at the quoted price.
- ⚠ **Design risk.** Curve/preset parameters and the milestone escalator are tuned and modeled – but game economies can behave in unexpected ways.
- ⚠ **Dependency risk.** The 721 lens mints (survivors, compression, trophies) run through SuperRare's assisted setup – scope and timing are not solely ours.
- ⚠ **Site-layer honesty.** Court votes, wagers, and trades are community signal, not on-chain settlement. Only burns are consensus.
- ⚠ **Regulatory & key risk.** Rules vary by jurisdiction and can change; self-custody means a lost key is lost funds.

THE HONEST BOTTOM LINE.

This is a **game and an art project**, not a yield product. There is **no expectation of profit**. If any part of this reads like a promise of returns, re-read it: it isn't one.

All memes are memes. Not financial advice.

Not financial advice. Nothing in this document or on upperdeckripmaster3030.com is financial, investment, legal, or tax advice, nor an offer or solicitation to buy or sell any asset. **\$UR3030** is an experimental, volatile utility/collectible **game token** intended for play and collecting – **not an investment contract** and **not a security**. There is **no promise, guarantee, or expectation of profit, value, liquidity, or future development**. You may lose everything you put in.

All memes are memes. The cards, characters, names, and imagery are works of **art, parody, satire, and commentary** – transformative by intent. Any resemblance to real people, brands, or trademarks is used as cultural reference and critique, not endorsement or affiliation. The project will review and, where appropriate, retire content in response to good-faith legal requests.

Do your own research. Crypto assets and smart contracts carry risk, including total loss and bugs. Interact at your own risk, comply with the laws of your jurisdiction, and consult your own qualified professionals. By acquiring or using \$UR3030 you accept these risks and that the artist, contributors, and SuperRare make **no warranties** of any kind.
