

TRANSPARENT WHITEPAPER · V1 · NFA

UPPERDECK RIPMASTER 3030

\$UR3030 · a liquid trading-card game on SuperRare Liquid Editions

by Gianni Arone (lovebeing · @_lovebeing_) · SuperRare Liquid Editions — Cohort 1

A card game whose losers actually leave the table.

- ▶ Every card is a **live SuperRare Liquid Edition** priced by a bonding curve in **RARE**.
- ▶ **\$UR3030** is the in-game token you rip packs, vote, wager, and settle with.
- ▶ A full field of **~196** cards opens each season; the crowd **burns it down to a deck of 77**.
- ▶ Two clean flows go to **people** — a creator cut and a house bounty. Everything else **burns**.
- ▶ **No treasury. No team pre-mint. No fee wallet.** The reserve can't be pulled.

THIS DOCUMENT IS TRANSPARENCY, NOT A PITCH.

\$UR3030 is a **collectible game token**, not an investment. It can go to zero. The cards are **art, parody, and memes**. Play for the fun of it. Nothing here is financial, legal, or tax advice — see the last page.

Open the field. Play it down to 77.

- ▶ **The field opens** – every registered card is in play, each its own liquid edition.
- ▶ **Rip & collect** – packs mint ERC-1155 copies across five tiers: Common → Uncommon → Rare → Mythic → Prizm.
- ▶ **The Rarity Court** – holders burn to **promote**, **demote**, or  **HODL** a card. Up pays the creator; down burns.
- ▶ **The cull** – downvotes (on a **quorum**) retire cards; owning a whole edition lets you **destroy** it forever.
- ▶ **Survivors** – the field resolves to a **standard deck of 77**. Hold one and you hold 1 of 77 that outlived the rest.

ash – retired is forever

A cheap micro-token on a Uniswap-v4 + Doppler curve.

- ▶ **Supply cap:** 3,030,000 \$UR3030, capped. Minted on **buy**; the cap is a live-supply ceiling, not a lifetime budget.
- ▶ **Opening price** $\approx$ 1 RARE / token (**~\$0.02**) — kept cheap so every toll and vote is a micro-move.
- ▶ Liquidity is a **Doppler multicurve** (log-normal) inside a **Uniswap-v4 pool**; reserve/quote is **RARE**.
- ▶ **FDV at a full curve** $\approx$ \$606k — an artist-scale niche edition, by choice. Verified with `--preview` pre-mainnet.

RARE

reserve currency

~\$606k

full-curve FDV

Two on-chain unknowns are confirmed with the Rare CLI before mainnet: the effective demand multiple **M** and the **sell-fraction**. The whole model is reproducible in `scripts/token-model.mjs`.

Nearly every move burns. Two flows go to people.

🔥 BURN (DESTROYED)

- send 1 · trade 1/side · wager 2/side · marquee 25
- downvotes (demote a card)
- most of every pack (~349 of ~350)
- destroyed editions + their toll

🎨 CREATOR (DIRECT TRANSFER)

- upvotes / promotions
- HODL 🛡 votes
- a royalty stream, not a treasury – visible in [CreatorPaid](#)

🏠 HOUSE BOUNTY (PLAYER POOL)

- 1 token from each pack seeds it
- pays whoever ends an edition (last-standing reward)
- a bounty, not an operator wallet – anyone can [fundReward](#)

There is no fee wallet and no treasury. The burn is destroyed; the creator cut and house bounty are direct, legible on-chain transfers. Curator-tunable, all in the open contract [CardVault.sol](#).

The one premium action. Everything else is a micro-toll.

- ▶ A pack is a **bundle of ~350 \$UR3030** $\approx$ \$7 (seven cards, ~\$1 a card) – **not** a token reprice. FDV is unchanged.
- ▶ Each rip is a real **buy-and-burn of hundreds of tokens** – the engine of steady pressure, not a pump.
- ▶ **Within a season:** price walks a line from base $\rightarrow$ ceil as the allotment sells (S1 350 $\rightarrow$ 525 tokens).
- ▶ **Across seasons:** the field shrinks, so the **allotment (cards $\div$ 7) dwindles** and the floor rises.
- ▶ Sell out the allotment and packs **close for the season** – cards trade secondary only.

SEASON	PACK ALLOTMENT	BASE $\approx$ \$*
I · Summer	10,000 packs	\$7.00
II · Fall	7,500 packs	\$9.00
III · Winter	5,000 packs	\$12.00
IV · Spring	2,500 packs	\$16.00

*Floor priced at the launch spot (\$0.02); token appreciation rides on top. Curator-set at `openSeason()`, recalibrated to the live token price.

Four a year. We launch in the season we're in.

SEASON IV

SPRING

SOON

- Each season **opens a full field** and the crowd burns it down to **77 survivors**; the best non-survivors seed the next season's field – a rolling tournament, not a delete.
- Every retirement mints the last keeper a **soulbound Ash Trophy** + a token bounty from the house.
- The render reads **live market + game state**, so a card's art evolves with its price and how the crowd treats it.

Built to ratchet, not to spike — and to add liquidity.

- ▶ **Un-pullable liquidity** — the RARE reserve lives in the pool, not a yankable LP. Sells walk down the curve; they can't drain it to zero.
- ▶ **No team pre-mint** — nothing is minted at genesis to dump on you.
- ▶ **Buy-and-burn packs** — RARE flows in on every buy, tokens vanish on every burn, so fewer tokens sit on a deeper reserve.
- ▶ **Adding liquidity** — seed real RARE at deploy, let buys deepen the reserve, and **recycle a share of the creator cut / house pool back into RARE reserve** on a schedule.

WHAT THIS IS NOT.

Not a promise the price goes up. Net supply moves with **buys - burns** — the sign is not guaranteed. Deflationary *pressure* is a design goal, not a floor. Read the real trajectory live from `totalSupply()`.

Everything that matters is on-chain and reproducible.

- ▶ **Open economy contract** – `CardVault.sol`: tolls, votes, packs, destruction, bounty. Curator setters are visible.
- ▶ **Reproducible model** – `scripts/token-model.mjs` re-derives every number in this deck. Run it yourself.
- ▶ **Legible flows** – `CreatorPaid`, burn, `AshTrophy`, `EditionDestroyed` events are the receipts.
- ▶ **No hidden wallet** – no fee address, no treasury, no admin mint of the token supply.
- ▶ **Testnet first** – a full Sepolia dress rehearsal before any mainnet deploy.

YOU CAN CHECK US.

Read the contract. Run the model. Watch the events. Transparency here means you don't have to trust the copy on this page – the chain is the source of truth.

Ways this can lose you money or break.

- ⚠ **The token can go to zero.** It is experimental and highly volatile. Only spend what you can lose entirely.
- ⚠ **Smart-contract risk.** Code can have bugs. Assume it is unaudited unless a published audit says otherwise.
- ⚠ **Liquidity & slippage.** A thin market means large trades move price hard; you may not be able to exit at the quoted price.
- ⚠ **Design risk.** Curve/preset parameters, burn balance, and reward solvency are tuned and verified – but game economies can behave in unexpected ways.
- ⚠ **Regulatory & key risk.** Rules vary by jurisdiction and can change; self-custody means a lost key is lost funds.

THE HONEST BOTTOM LINE.

This is a **game and an art project**, not a yield product. There is **no expectation of profit**. If any part of this reads like a promise of returns, re-read it: it isn't one.

All memes are memes. Not financial advice.

Not financial advice. Nothing in this document or on upperdeckripmaster3030.com is financial, investment, legal, or tax advice, nor an offer or solicitation to buy or sell any asset. **\$UR3030** is an experimental, volatile utility/collectible **game token** intended for play and collecting – **not an investment contract** and **not a security**. There is **no promise, guarantee, or expectation of profit, value, liquidity, or future development**. You may lose everything you put in.

All memes are memes. The cards, characters, names, and imagery are works of **art, parody, satire, and commentary** – transformative by intent. Any resemblance to real people, brands, or trademarks is used as cultural reference and critique, not endorsement or affiliation. The project will review and, where appropriate, retire content in response to good-faith legal requests.

Do your own research. Crypto assets and smart contracts carry risk, including total loss and bugs. Interact at your own risk, comply with the laws of your jurisdiction, and consult your own qualified professionals. By acquiring or using \$UR3030 you accept these risks and that the artist, contributors, and SuperRare make **no warranties** of any kind.
